## ВСТУП

Навчання математики в початковій школі ефективно розвиває інтелект та пам'ять учнів, формує у них здатність зосереджуватися і логічно міркувати, що сприяє загальному розвитку особистості дитини. Завданням серії навчальних посібників «2000 вправ та завдань» з математики є закріплення та удосконалення в учнів усвідомлених і міцних обчислювальних навичок, сформованих на уроках математики в школі.

Цей посібник пропонує учням 2 класу близько 3000 завдань на повторення вивченого у 1 класі, формування навичок додавання і віднімання з переходом через розряд в межах 100, опанування дій множення та ділення, вивчення таблиць множення і ділення, розв'язування виразів на одну та дві дії та виразів із дужками.

Посібник багатофункціональний та може використовуватися і як «математичний тренажер», і як зошит для перевірки знань. Матеріал, уміщений у ньому, можна застосовувати для індивідуальної і фронтальної роботи, а також для тренувальної роботи вдома.

У залежності від рівня знань і умінь учнів та складності виконуваних завдань учитель самостійно визначає час, який відводиться на розв'язування завдань, та оцінює вміння учнів згідно з критеріями оцінювання навчальних досягнень.

При використанні посібника вдома як тренувального зошита функція контролю та оцінювання покладається на батьків. На виконання одного блока завдань автор рекомендує відвести час, установлений у процесі апробації посібника: з виразами на одну дію — 4 хвилини, з виразами на дві дії — 6 хвилин. Рівень знань дітей позначають в кружечках-сонечках під блоками завдань за допомогою смайліків, керуючись такими міркуваннями:

- якщо блок завдань розв'язано без помилок, то це високий рівень;
- 1–3 помилки — достатній рівень;
- 4–6 помилки — середній рівень;
- 7 помилок і більше — низький рівень, який свідчить про те, що учень потребує додаткових занять із цією темою.

Робота над поданими в посібнику завданнями дає можливість довести обчислювальні навички дітей до автоматизму.

Тренувальний зошит є універсальним, його можна використовувати як доповнення до будь-якого підручника з відповідної навчальної дисципліни.
